Task 2 About

I have started building my professional digital presence across three main platforms: GitHub, LinkedIn, and Kaggle. Each of these serves a different purpose and together they help create a well-rounded profile as a student preparing for a career in technology.

GitHub is mainly used for hosting and sharing code. It allows developers to showcase their projects, collaborate with others, and maintain a record of their work over time. I created a Profile README on GitHub that includes my name, branch, year, and a brief learning goal. This works as a simple introduction for anyone visiting my profile. Going forward, I plan to regularly upload projects, assignments, and personal work so that my progress is visible and consistent over the next four years.

LinkedIn is a professional networking platform widely used by recruiters, companies, and academic institutions. I have set up my profile with my education details, including my B.Tech in Computer Science at VIT Bhopal University (2025–2029). Over time, I plan to keep updating it with new skills, certifications, internships, and projects so that it reflects my growth and experience.

Kaggle is focused on data science and machine learning. It provides access to datasets, competitions, notebooks, and learning resources. Since I am still in the early stage, I haven't explored it much yet. However, I plan to start using Kaggle more actively in my second and third year, especially for practicing data analysis, taking part in beginner competitions, and completing courses in Python and machine learning
